

No more ugly down spout extensions to step over or get in the way of your lawn mower. Our underground downspout system easily adapts to all down spouts, without any special tools or fittings.

Water free falls into debris filter and flows underground through PVC pipe. As water fills up in the Bubbler pot the lid rises up to let water evenly overflow onto your lawn. Drainage slots in the Bubbler pot let standing water filter down

into the ground. The solid drain cover will then drop down and seal out grass clippings and dirt. The new center drainage post has a vertical drain slot that won't plug up from sediments and the center supports the cover for heavier top loads.

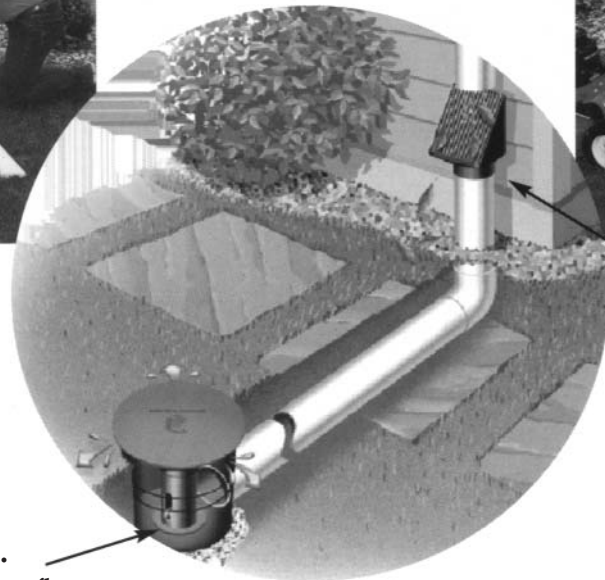

The new larger debris filter will catch water from down spouts up to 6 1/2 " in diameter, and will allow you to use 4" round PVC in place of the 3" square pipes.
